

# Diamond Institute for Infertility and Menopause

May 2011

*Dear Patients, Physicians, Staff Members and Friends of Diamond Institute*

**"Hand in Hand with Patients" The Assistance You Require With The Care You Desire,**

The Diamond Institute is celebrating its 43rd Anniversary and would like to welcome you all to our Annual Mother's Day Party. This event is a celebration of all of the hopes and dreams that come with having a baby. Seeing our families gives us the drive to continue to be the successful center we have always been.

Diamond Institute would like to welcome Dr. Ndidi Onwubalili, infertility specialist who will be joining the practice by early summer.

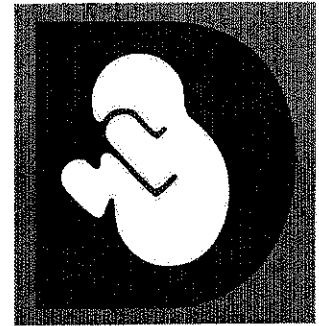

Through the last year we have been seeing a shift in patient needs for some of the services provided in our center. We are seeing more patients looking for infertility help due to inheriting a genetic disorder such as patients who carry the BRACHA or LYNCH gene which increases the risk for ovarian, breast, or colon cancer. These patients like to do IVF with PGD to select only healthy embryos to be transferred. We are also seeing more patients with the need of fertility preservation due to cancer or

age related concerns. These patients come to our center for sperm and/or egg freezing.

At Diamond Institute, we appreciate the opportunity to participate in your infertility treatment and are committed to close communication and feedback with all patients Ob/Gyn's. Diamond Institute realizes that a patient's Ob/Gyn is integral to the infertility process.

Our dedicated physicians and staff collaborate with OB/GYN's regarding their own patient needs. We help physicians by providing their patients with Hystersalpingogram (HSG), Sonohysterograms (SHG), Semen Analysis (SA) and consult with their physicians through their care. Our goal is to deliver the highest quality medical care you and your doctors expect along with the goal of achieving a healthy pregnancy.

Many factors affect the quality of an individuals infertility treatment. Diamond Institute offers state of the art care.

These include the quality of laboratory and clinical services, documentation of care, patient choice, research and teaching commitment, cost-effectiveness of care, psychological support and professional management.

Diamond Institute would like to wish each and every one of our patients, nurses, staff members and referring physicians the best of luck for the upcoming year.
